

mattamyHOMES

YOUR FIREPLACE

If your new Mattamy Home includes a fireplace, please familiarize yourself with the information below before using it for the first time. For more information, please refer to your fireplace manual.

PLEASE NOTE...

If you did not receive your fireplace manual from your builder, you may find it underneath the fireplace, located behind the bottom access grill. If no manual is found there, please contact your Warranty Service Office for a replacement.

LIGHTING YOUR FIREPLACE

Your fireplace is equipped with an Electronic Gas Valve which automatically lights the pilot light. DO NOT try and light the pilot by hand. Please refer to your fireplace's Installation and Operation Instructions manual under Operation/Lighting Instructions and follow the instructions listed for "Electronic Gas Valve."

1ST USE

Your new fireplace will give off an unpleasant odour when used for the first time. Please be aware, **your fireplace must run for at least 10 hours continuously** to cure the paint, oils, and gasket inside the fireplace. If your fireplace continues to emit this odour after this first continuous run, we recommend a second 10-hour burn-off period to rectify the problem. If you have installed the optional fan kit please make sure it is on the 'off' position during this time.

NOISE

Due to the fact that the gas fireplace is constructed of metal, there will be noises from the fireplace as it heats up, caused by the metal expanding, and also as it cools down and the metal contracts.

CAUTION

Your fireplace can get very hot. A Barrier Screen designed to reduce the risk of burns from the hot viewing glass is provided and installed on the fireplace to conform to the new 2015

building code requirements. Please refer to your fireplace's Installation and Operations Instructions manual under "Installing and Removing Glass Door" for more information on the barrier and glass door removal for cleaning the glass. **Please note, children should never be left unsupervised when the fireplace is operating.**

CLEANING

Your fireplace may also emit strong odours when started for the first time after the summer, or after long periods of non-use, due to accumulated dust, etc burning off. To minimize this, we strongly recommend cleaning the fireplace by following the instructions in the manual under "General Maintenance." You may also find it helpful to remove the top grill to wipe off the dust and to vacuum underneath the fireplace through the bottom grill access. When cleaning the fireplace glass, we recommend you only use "Gas Fireplace Glass Cleaner," available at gas fireplace retail stores and some Canadian Tire stores.

OPTIONAL FAN KIT

If you ordered an "Optional Fan Kit" with your fireplace, please note that the fan is heat-activated only; therefore, the fan will only turn on after the fireplace has become hot enough to activate it. This usually takes approximately 30 minutes. There may also be a switch on the wall, which must be in the on position to allow the fan to operate.
